Communication Network Planning System

Description

NetMan manages sites, stations and all the different administrative and radio network characteristics in a quickly and easy way.

NetMan working together with the Radio Network Planning Tool, **SIRENET**(owned by Avánzit), forms an efficient system that carries out all the phases of a radio telecommunication network implementation.

Aplication

Radio manufacturers, spectral managers, broadcasters, engineering / consultancy, public emergency, teaching / universities

Features

- It allows working simultaneously with SIRENET or another planning tool.
- It allows the roll out, the management and the supervision of any network radio in a quick and efficient way.
- Great possibility of management all the database elements through options as *filter, edit, copy and link.*
- Management of coverage transmitter and shadowed zones
- Possibility of copy/paste data from any Microsoft application (Excel, Word and Access)
- It also counts with all the functionalities of a street directory.
